

Civic AI Talent Match

AI-Powered Opportunity Matching Platform for Workforce Development

Problem

Many workforce programs successfully train learners, but struggle to connect them with the right employers. Learners miss opportunities, employers struggle to find talent, and career navigators spend too much time manually matching people.

Solution

Create a lightweight AI-powered prototype that matches learners with employers in real time using profile data and AI recommendations.

Core Features

- 1 Learner Profiles: skills, certifications, career interests, education, work experience
- 2 Employer Profiles: job title, required skills, certifications, work type, industry
- 3 AI Matching Engine: match score, best-fit recommendations, skill-gap analysis
- 4 Navigator Dashboard: view talent pipeline, demand trends, and recommended placements

Hackathon Build Scope

- Learner profile form
- Employer opportunity form
- AI matching logic
- Recommendation dashboard
- Basic reporting prototype

Partner Organization Provides

- Sample learner data
- Sample job listings
- Feedback/testing

Impact

- Faster job discovery for learners
- Better hiring visibility for employers
- Reduced manual work for navigators

Pitch Line: “Think of it as LinkedIn meets workforce development — powered by AI for local talent, employers, and career navigators.”
